

Case Study

Friends

Friends is a real-time messaging and group chat application. Using friends you may share rich messaging (text, picture, video, audio, other files), location sharing and many more. The status of each sent message is notified in real time; for example read, delivered, sent, call ringing, answered, waiting, etc. It allows you to make high-quality video and voice call, real-time presence updates like online status, message status and typing indicators.

The Challenge

The client requested to develop real-time messaging application that allows the user to communicate with each other faster and more efficiently and the core functionalities must include privacy, security, and the easy-going messages, pictures, and videos. User should be given permission to edit and update their profile and account.

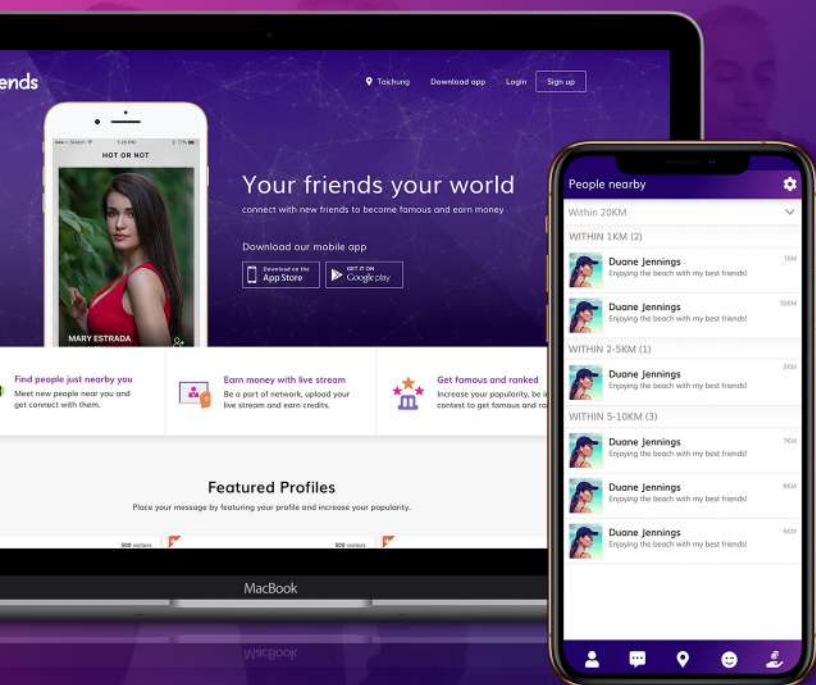

The Solution

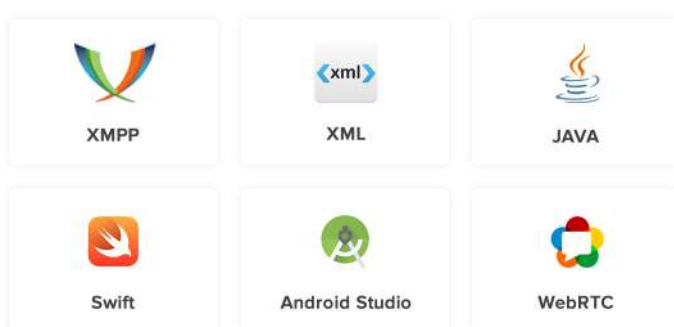

StarTele Logic team has developed friends which supports almost all popular platforms. We have used the latest technology to build a modern look eye-catching design and make a complete and interactive real-time messaging. It's modular, lightweight and easy to integrate. Now users may send images, audio and video files, and various documents. All of these are also protected by encryption.

Top Features of Friends:

- Profile Customization
- Messaging
- Group Chat
- Video & Voice Call
- Media File transmission
- Push Notification
